**ARTIFICIAL-BREEDING ORGANIZATIONS IN THE UNITED STATES
ACTIVE JANUARY 1, 1957**
(As reported by State Extension Dairymen)

On January 1, 1957, there were 673,970 herds enrolled in artificial-breeding organizations. During the year 1956, 5,762,656 cows were bred artificially. This is the largest number of herds enrolled and cows bred since the beginning of artificial breeding in this country.

Compared with the previous year, there was an increase of 12,473, or 1.9 percent, in the number of herds enrolled, and an increase of 348,782, or 6.4 percent, in the number of cows bred.

Wisconsin maintained its lead of the States in number of cows bred in artificial-breeding organizations, with 1,057,594 cows bred in 1956. States in which 100,000 or more cows were bred in artificial-breeding organizations in 1956 are as follows:

Wisconsin	1,057,594	Illinois	268,500
Minnesota	528,719	California	262,648
New York	466,560	Michigan	253,371
Pennsylvania	456,816	Indiana	157,638
Ohio	346,882	Missouri	156,115
Iowa	336,692	Washington	122,113

On the following pages are data showing the status of artificial-breeding organizations for the various States.

 Wyoming----- I. W. Slater, Ext. Division, College of Agr., Laramie.

DHIA PROVED-SIRE RECORDS TABULATED IN FEBRUARY 1957

Following is a list of 414 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in February 1957. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i.e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i.e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
